

PRODUCT INFO

Cross clamps KK of die-cast aluminum or precision-cast stainless steel have slitted clamping points machined by cutting methods.

The bores of the clamping points are offset in the plane and arranged at an angle of 90°. They receive typically available rods and tubes with full surface contact over the entire cross-section of the bore.

At the screw points, hex socket cap screws or adjustable hand levers reduce the bore cross-section for clamping.

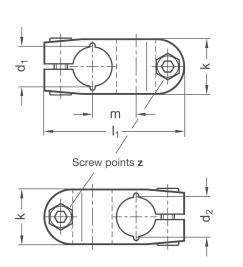

Adjustable hand levers are intended for repeated, tool-free clamping. Under the designation HSK or HEK, these are available separately for individual use and in other designs.

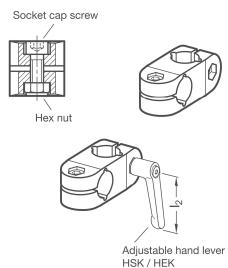

Compared with the tool-operated hex socket cap screw, the clamping force achievable with an adjustable hand lever is lower due to the shorter lever length.

RoHS-compliant product

2	Aluminum, textured powder-coated, Black RAL 9005					
8	Aluminum, blasted, matt					
ED	Stainless steel, blasted, matt					

ACCESSORIES

- Adjustable hand levers **HSK** see page 168
- Stainless steel adjustable hand levers **HEK** see page 170

ON REQUEST

- Clamping points
 with different diameters d₁ and d₂ or special diameter
- Screw points with hex head screws or mixed screw / hand lever elements
- Surface
 ball-burnished, anodized or powder-coated in other
 RAL colors
