

## PRODUCT INFO

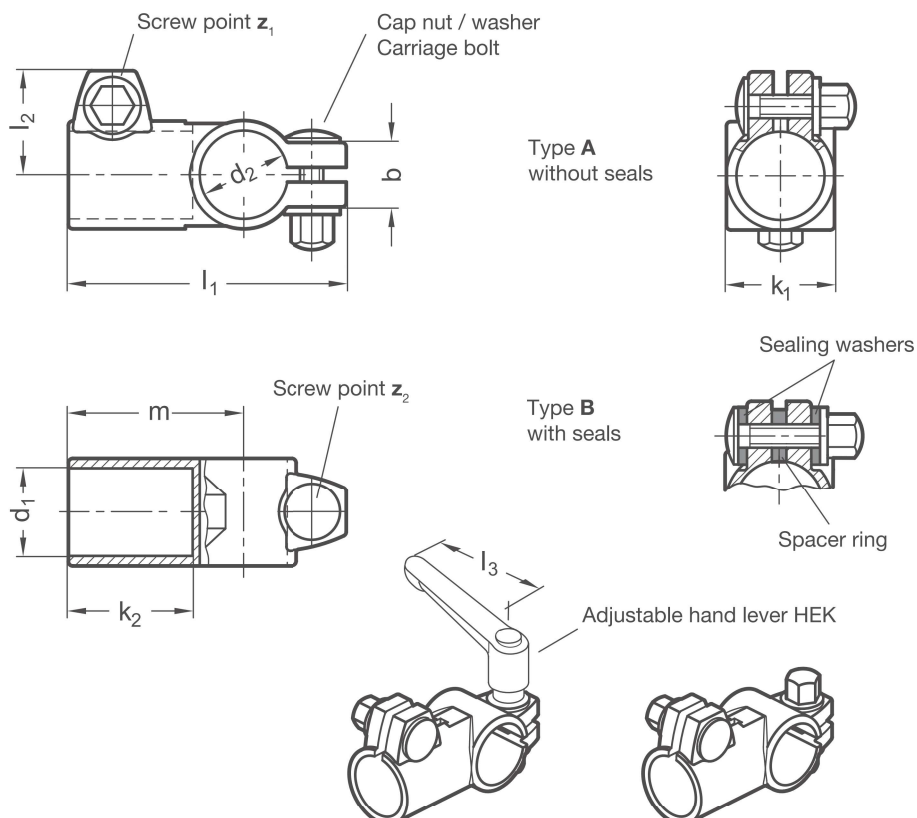

**Cross clamps TE** of matt blasted precision-cast stainless steel have a slitted clamping point machined by cutting methods.

The bores at the clamping points are situated in a plane and arranged in a T-shape. They receive typically available construction tubes with full surface contact over the entire cross-section of the bore.

At the screw points, carriage bolts together with cap nuts or adjustable hand levers reduce the bore cross-section for clamping. Type B is equipped with seals at the screw points.

Adjustable hand levers are intended for repeated, tool-free clamping. Under the designation HEK, these are available separately for individual use and in other designs. Compared with the tool-operated hex socket cap screw, the clamping force achievable with an adjustable hand lever is lower due to the shorter lever length.

## RoHS-compliant product

**ACCESSORIES**

– Stainless steel adjustable hand levers **HEK** see page 170

**ON REQUEST**

– Screw points with hex head screws or mixed screw / adjustable hand lever elements
