

## REVERSE-SEAL

Reverse-seal is available on SGL type. NB's Reverse-Seal is a seal unit that consists of reverse plate, seal, and cover.

This seal unit has another side-seal in the reverse orientation to the block, which achieves maintenance free by reducing grease loss.

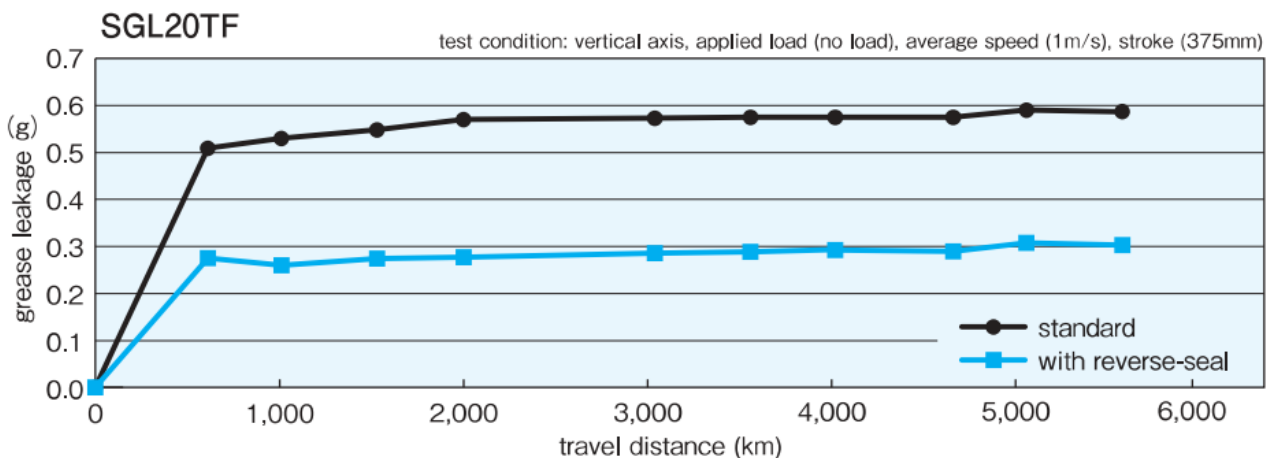

Figure A-33 Reverse-Seal

### Reducing Grease Leakage

The space between two seals holds grease to minimize a grease leakage from the block.

Figure A-34 Grease-leak Test Data

### Maintenance Free

Reverse-seal makes a "grease pocket" between two seals that realizes maintenance free by reducing grease leakage and loss.
