

LUB // Lubricants

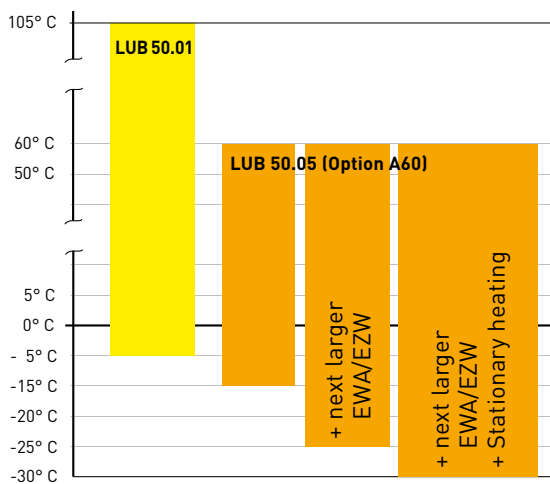

- Special lubricants for use with our drive units, gear units and racks.
- **Note:** In all cases, the power supply must be isolated before starting any maintenance work. All details in the assembly manual must be followed.

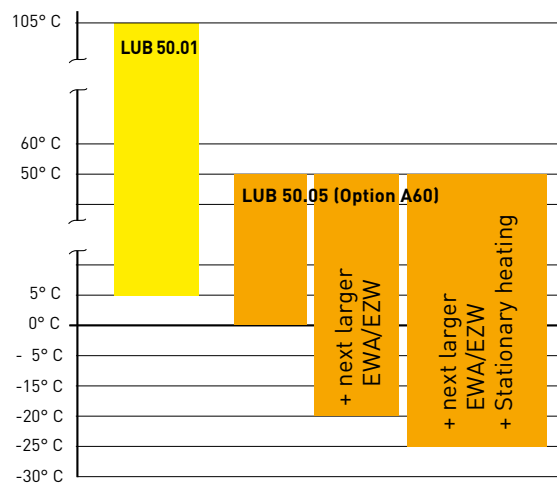

Note:

- The use of this lubricant, approved for our products, extends their service life substantially and is fundamental to our products operating without technical problems.

**EWA 1/3/5 rpm
EZW 250/450/600 mm/min**

**EWA 6/9 rpm
EZW 1200/1850 mm/min**

→ The temperature range for Option A60 can be enlarged downwards by selecting the next most powerful EWA/EZW and/or in addition using stationary heating in the electric motor. We will be pleased to help you to choose.

Version	Type no.	Info	Temperature [°C]	m [kg]
